

Architect / Functional Designer (Embedded) Software Development

The job

As an architect / functional designer, preferably with project management ambitions or experience, you are responsible for defining, planning, coordinating, reviewing, and finalizing projects assigned to our international team. You will work closely with your project managers, developers and the QA team to ensure that the team delivers consistently high quality solutions. The job can be from 0,8 to 1 FTE.

The profile

- Minimum of 2 years of experience.
- A self-motivating person with good communication and interpersonal skills to join our team of dedicated professionals.
- A person who has provable leading capacities and who is able to acquire knowledge independently and share with the team.
- Proficient in defining project plans, business and functional requirements, identifying bottlenecks and issues from a top-down approach and converting requirements into a design.
- Responsible for maintaining scope, meeting planning -, budget - and technical goals.
- Proficient in providing architectural and design guidance.
- Knowledge of agile processes.
- Good command of written and spoken Dutch and English.
- Basic knowledge about (automotive) electronics, Linux and Android internals would be a plus.

The company

Quipment is a trendsetting company when it comes to optimizing business processes with state of the art IT solutions for the taxi and logistic business. These solutions are mainly focused on planning and control processes and consist of software and board computers.

Besides this, Quipment offers also professional services like consultancy, project management, installations and implementations.

Quipment headquarters are in the Netherlands (Nijmegen). Quipment has a 100% owned subsidiary in India that is responsible for software development, system administration and customer support. The Dutch R&D team consists of project managers with a software development background. You will work closely together with the other team members in the Netherlands, 7 in total. The organization is informal and horizontal organized with short lines of communication. In India we are growing rapidly and that team consists of 70 people in which about 30 will be closely working for our Dutch projects. For more details visit our website www.quipment.nl
